EXPERIMENT

Title

MATHS TEST

Description

Alice has a mathematics test for which she is underprepared. She has to do at least one question correctly to pass the test. He decides to do a question which needs her to find the smallest prime number which is larger than a given integer N. Your task is to find and return an integer value representing the smallest prime number larger than N.

Input Format:

input1: An integer value N

Output Format:

Return an integer value representing the smallest prime number larger than N.

Sample Input

Sample Output

7

Source Code:

```
n=int(input())
 num=n+1
while True:
                                     is_prime=True
                                      if num>1:
                                                                          for i in range(2,int(num**0.5)+1):
                                                                                                               if num%i==0:
                                                                                                                                                   is_prime=False
                                                                                                                                                   break
                                                                           if is_prime:
                                                                                                               print(num)
                                                                                                               break
                                      num+=1
                                                                                                     38R23FC091 3R2091 3R2091
